How do I set up Mail Output combining in Lasernet?

Mikael Wängelin - 2023-01-26 - Comment (1) - Lasernet Developer FAQs

Combining in the Mail Output module works slightly differently than in other combining modules. Rather than combining multiple documents generated by Lasernet into one document, the Mail Output module allows multiple generated documents to be attached to an email as separate attachments. This email can then sent to multiple email addresses as required.
