

## How do I update my Lاسernet license?

Alex Clemons - 2021-10-04 - Comments (0) - Lاسernet FAQs

# Lاسernet

When you have upgraded your Lاسernet server to include additional modules and packages, there is a need to update/reactivate your Lاسernet license. This will enable you to benefit from the new features available in your new license. To do this, follow these steps below, and/or watch our video tutorial:

### Video Tutorial

Learn how to update/reactivate a license with the help of our video tutorial, *Lاسernet License Manager Part Three*. Click the **Watch Video** button below:

1. Open *Lاسernet License Manager* and select the required service instance.

2. Click the **Reactivate** button in the toolbar.

The license is now updated. This process can be repeated for Lasernet Developer.

### **Offline Reactivation/update**

In order to perform an offline reactivation, you must first deactivate the server or developer using the offline deactivation process. When the deactivation process is complete, you must perform the [offline activation](#) process.

### **How do I check that my license has been updated?**

To ensure your license has been updated to include additional modules and packages, you can use the Lasernet Monitor application. Please follow these steps:

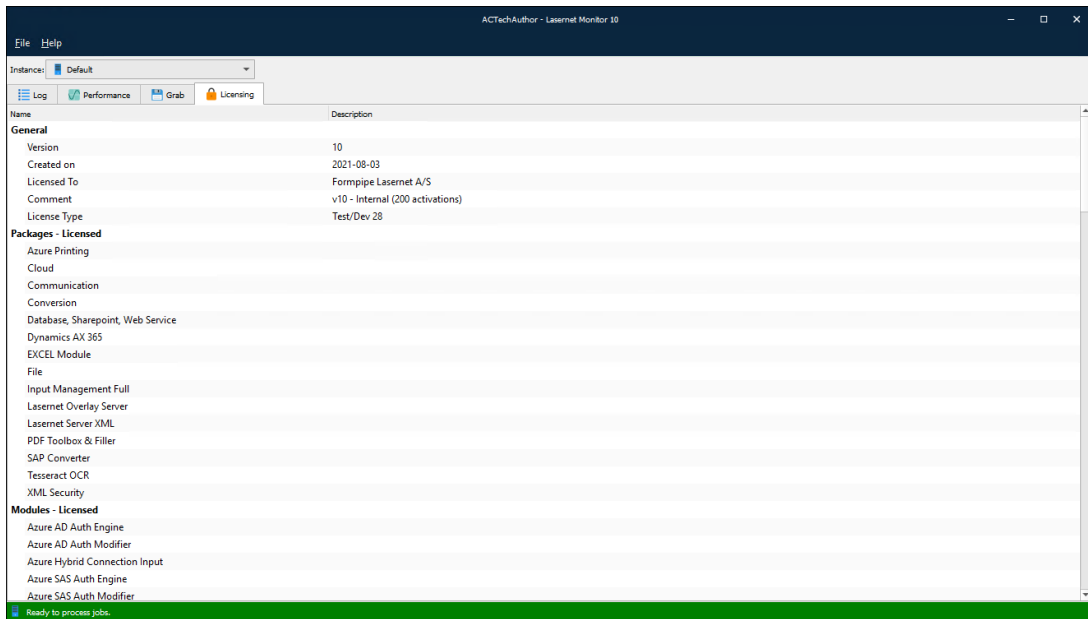

1. Open *Lasernet Launcher* and select the **Monitor** application.

2. Enter your credentials to connect to Lasernet and select the relevant instance from the **Instance** dropdown menu.
3. Click the **Licensing** tab.

This will display a list of modules and packages that are included in your current license.
