

How to embed a Base-64 encoded PDF sheet in an XML file

- 2021-04-27 - Comments (0) - Lاسernet Developer FAQs

Lاسernet

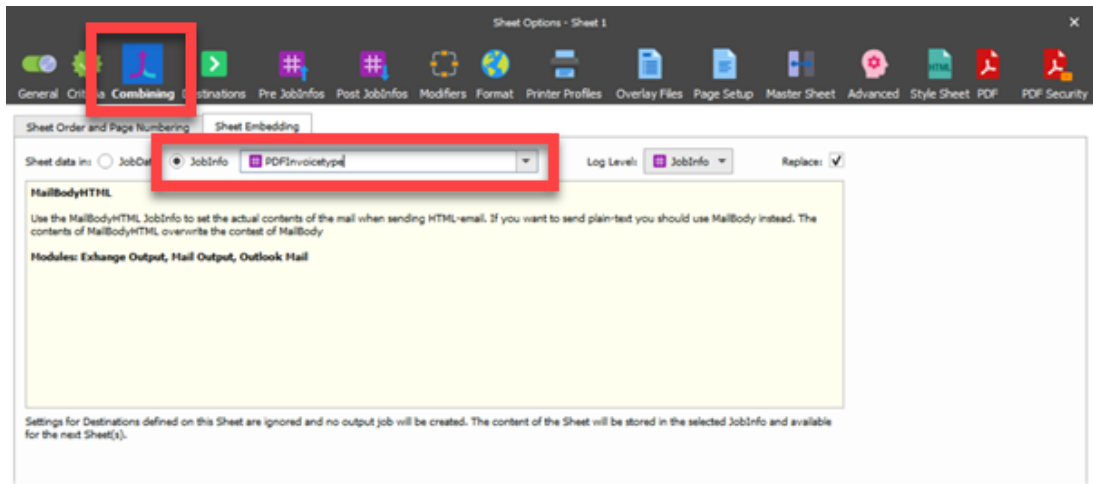

To embed a Base-64 encoded PDF sheet into an XML file, follow these steps:

1. Create a PDF sheet and place it before an XML sheet.

2. Within the *Sheet options* window, select the **Combining** option and then click the **Sheet Embedding** tab.

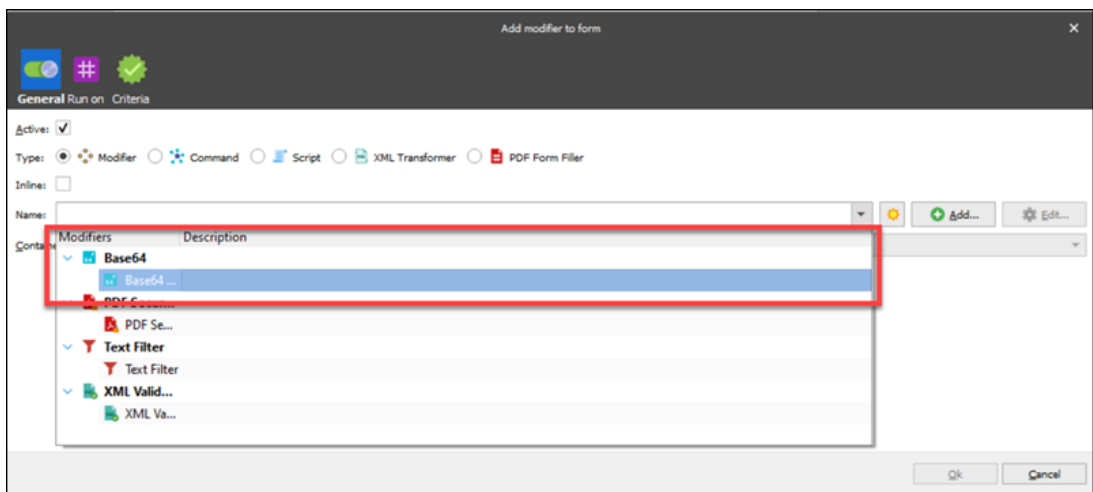

3. Select the **JobInfo** radio button and then type in a name for the document and click **Ok**. In the example, we see 'PDFInvoicetype'.

4. On *Sheet Options*, click **Modifiers**, right-click **Sheet End** and select **Add** from the pop-up menu.

The *Add modifier to form* window is displayed.

5. On the *Name* drop-down menu, select **Base64** and click **Ok**.

6. On the XML Sheet, insert the data into an element using the Insert Text option - type of Insert text: JobInfo.

```

▼ cac:AdditionalDocumentReference
  cbc:ID
  ▼ cbc:DocumentTypeCode          380
    @listAgencyID                6
    @listID                       UN/ECE 1001
  ▼ cac:Attachment
    ▼ cbc:EmbeddedDocumentBinaryObject [JobInfo:PDFInvoice]
      @mimeType                    application/pdf
      @encodingCode                Base64

```
