

## Lasernet Archive button is slow

- 2022-10-21 - Comments (0) - AX 2012 FAQs

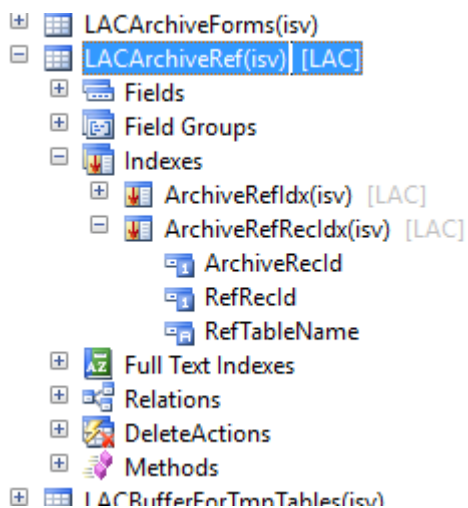

This article provides a solution for a slow Labeled Archive button when you try to select the Labeled dropdown menu from a Journal in AX 2012.

The reason for the slowness in the dropdown menu is that the database has a **Compatibility level** that is set to SQL 2014. This then makes our index on the LabeledArchiveRef table incorrect.

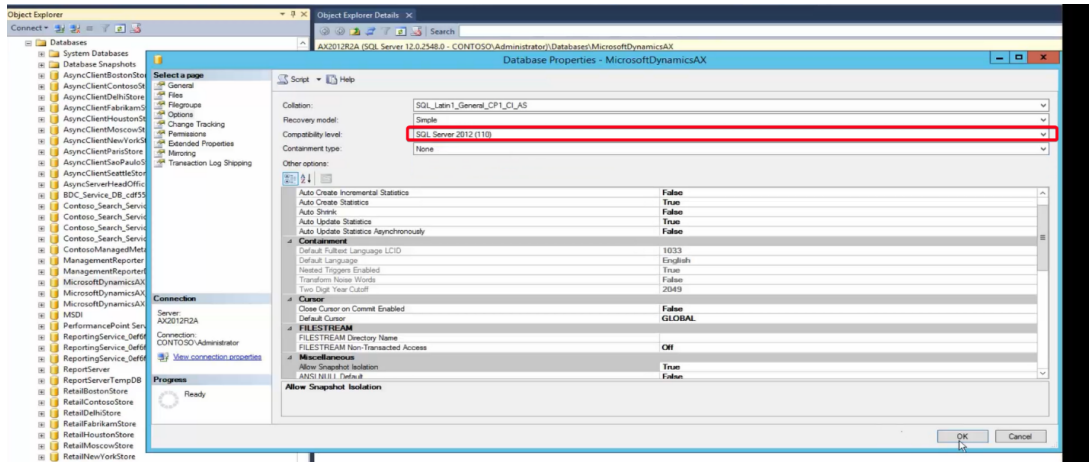

### Resolution

1. Check if index ArchiveRefReclId is created on table LabeledArchiveRef.

2. If it is not, import the attached XPO (zip file) or change the database **Compatibility level** to 2012.

Database **Compatibility level** changed to 2012.
