

Lasetnet Module Is not Visible

Alice Petruzzella - 2024-07-02 - Comments (0) - Lasetnet FO Connector FAQs

Issue

After installing Lasetnet Connector 6.21, the Lasetnet module might not be visible in the Navigation pane if you have either a new installation or a new legal entity to set up.

This occurs if no valid license key has been entered.

Solutions

To solve this issue, implement either of these solutions:

- Add **&mi=LACParameters** at the end of the URL. For example:
<https://environmentdevaos.axcloud.dynamics.com/?cmp=usp2&mi=LACParameters>

or

- Search for **Parameters (Lasetnet > Setup)** and enter a valid **License code**.

Either approach opens the **Lasetnet parameters** page, where a valid **License code** is required.
