

Lasetnet V9.x Portal password reset

- 2021-06-29 - Comments (0) - Lasetnet General Information

Lasetnet

You can now set a password for the admin account. The password must be changed when you log into the config website for the first time. Users can do this by following these steps:

1. Open the Lasetnet Portal and select the **Users and Groups** option:

2. Identify the user and click the **Reset Password** button.

The screenshot shows the 'Users' management page in the Lashernet application. At the top left, there is a back arrow icon and the text 'Users'. Below this, the name 'Alex' is displayed. There are two input fields: 'Name:' with a partially filled field, and 'Description:' with the text 'password' entered. Below the input fields are two checkboxes: 'Account is disabled' and 'User must change password on next login', both of which are unchecked. At the bottom of the form, there are two buttons: 'Save' and 'Reset password'. The 'Reset password' button is highlighted with a red rectangular border.

A new password is then given.

3. Click **Save**.

Forgotten password?

If you have forgotten your password, follow these steps

1. Open a command prompt and run **LnConfig.exe** in the command line with admin rights:
2. Enter **LnConfig.exe -reset-admin-password**.

As a result, a new password for the admin account written to the console is generated.
