Recommended links on the World Wide Web

- 2024-09-20 - Comments (0) - Lasernet General Information

When using Lasernet, it can be useful to know how to operate tools such as JavaScript, XML, XPATH, XLST and SQL.

To start learning about these tools, we recommend visiting w3schools.com. The following list provides links to beginners' level tutorials for:

JavaScript

XML

XPath

XSLT

SQL

Database Overview

In order to work with a database, a connection must be created. The parameters required for each type of database vary. A general overview is provided here, together with more specific instructions for commonly used databases.

Regular Expressions

Regular expressions are mostly used in the 'Text Filter Modifier/Engine' and 'Binary Filter Modifier', but it can also be very useful in JavaScript. A tutorial for regular expressions in provided here.

Barcodes

Lasernet 6.6 and older include symbologies for a list of linear barcodes. Barcodes, however, must be ordered separately as TrueType fonts from Elfring. Visit this link to know more.

Lasernet v6.7 and newer have built-in linear and 2D barcode support. Detailed information about the supported barcodes can be found here.

Label Printer Drivers

Loftware offers a wide range of true Windows drivers for label printers.

Process Explorer

[Process Explorer](#) is an external application that used to monitor which handles and DLLs processes have opened or loaded. It can be useful for memory investigation or handling leaks in third-party drivers used by Lasernet.

Note

None of the links above have any commercial interest for Formpipe software.
