

Lasetnet FO Connector 10.0.34 (PU 58) compatibility with Lasetnet

2023-05-11 - Alex Clemons - Comments (0) - Lasetnet FO Connector News

The PEAP version of Lasetnet FO Connector 10.0.34 (PU58) which is planned to get general availability (self-update) on June 16, 2023 is not compliant with any existing versions of Lasetnet FO Connector if Azure is used for the communication between Lasetnet FO Connector and Lasetnet.

The issue is caused by some files (.NET files used for Azure) that have been updated within the standard Dynamics 365 Finance & Operations.

Microsoft experienced a similar issue(s) in relation to their DRA (Document Routing Agent).

We have prepared 6.18.4 for 10.0.34 (PU58). The reason for this new "sub-version" is the failure of loading printers from the Cloud print connector as the RetryPolicy has been deprecated in the newer/updated version of the updated .NET file used for Azure (Microsoft.WindowsAzure.Storage).

The following error message would be displayed when loading printers from the Cloud Print Connector (CPC):

There are no issues on the Lasetnet Core, Lasetnet Cloud Print Connector, or the Lasetnet CE Connector.

Solution:

Upgrade your Lasetnet Connector to [version 6.18.4](#) - when upgrading your Dynamics 365 Finance & Operations to version 10.0.34.

[Contact us](#) if you have a Lasetnet Connector still running version 5.
