

SharePoint connection updated for Lasetnet FO Connector 10.0.32 PU56 - LAC Upgrade Required

2023-03-29 - Alex Clemons - Comments (0) - Lasetnet FO Connector News

If you validate for the SharePoint connection on a Lasetnet Connector version prior to 6.18.3 and are on 10.0.32 PU56 or higher, you will receive the following exception:

Error

Method not found: 'Void

Microsoft.Dynamics.Platform.Integration.SharePoint.RestProxyBase.AddAuthentication(System.Net.HttpWebRequest)'.
}

```
{"error_description": "ID3035: The request was not valid or is malformed."}
```

The DLL Microsoft.Dynamics.Platform.Integration.SharePoint was updated as part of version 10.0.32 PU56.

One of the changes made by Microsoft is the input parameter for the function AddAuthentication in RestProxyBase (SharePointProxy) from **HttpWebRequest** to **IHttpExecutorRequest**.

Solution

Dynamics 365 Finance & Operations users on version 10.0.32 PU56 or later, who are using SharePoint with the Lasetnet Connector, please upgrade to [Lasetnet Connector version 6.18.3](#).
